

Blood Chem Infection and Immune Dysregulation Action Steps

1. Identify a hematologist in your area that you would be comfortable referring patients to.
2. Review one patient's CBC and see if they fit one of the patterns that we discussed this week. Discuss with the patient, a colleague, a friend, or a family member.
3. Add serum complete blood count (CBC) with differential and hs-CRP to your electronic health record so you can easily order it for patients. For example:
 - a. Markers with LabCorp test code
 - i. CBC: Code 85025
 - ii. hs-CRP: Code 86141
